In order to understand the level of knowledge reached to develop the windows applications and Web based, we suggest two sample projects , to be develop in a very short time, using the technologies and the resources indicated below.

The projects based on sample free Microsoft database can be develop using the base tools offered free by Microsoft , and they will have the target to identify the level of knowledge reached, in order to identify the potential way to insert inside the development team.

Below you can see the link to download all the necessary resources:

Resource Link

Microsoft SQL Server Express 2008 and Database example of Microsoft SQL Server 2005 o 2008*

Adventure Works (2008) <http://msftdbprodsamples.codeplex.com/Release/ProjectReleases.aspx?ReleaseId=18407>

Adventure Works (2005) <http://www.codeplex.com/MSFTDBProdSamples/Release/ProjectReleases.aspx?ReleaseId=4004>

Northwind (2000-2008) <http://www.microsoft.com/downloads/details.aspx?FamilyID=06616212-0356-46A0-8DA2-EEBC53A68034&displaylang=en>

Microsoft SQL Server

2008 Express

<http://www.microsoft.com/downloads/details.aspx?FamilyId=B5D1B8C3-FDA5-4508-B0D0-1311D670E336&displaylang=en>

Note: you have to do update at SP1

*If Candidate had installed Microsoft sql server 2005(standard, development or enterprise) he can use this version for this project, else the candidate doesn't have this software or had installed Express(free) version, is recommended to use the new version of: Microsoft SQL Server Express 2008 (SP1).

Important note: to develop at professional level our team, demand original license legally acquired. Therefore – if candidate haven't in his possession original software - Is must invited to use the free resources provide by software Microsoft.

Development tools

Microsoft Visual Basic

2008 Express Edition

(SP1)

Microsoft Visual Web

Developer 2008 Express

Edition (SP1)

<http://www.microsoft.com/express/download/>

Consist to create an executable object connected to database 'AdventureWorks' that allow to user to execute the following operation: read, insert, edit and delete. On these tables:

- Production.Product
- Production.ProductListPriceHistory
- Production.ProductPhoto (be necessary show and load pictures in database).

manage eventual tables linked with constraint of FK.

Use technology of Entity Framework is particularly pleasant.

Consists to create web application connected to database 'Northwind' that allow to user to execute the following operation: read, insert, edit and delete. On these tables:

- Products
- Orders

manage eventual tables linked with constraint of FK.

Use technology of Linq To Sql is particularly pleasant.

The projects developments it will be deliver with all source code. Is recommended to give all contents of project directory included sub-directories.

Send the requested files to job@portguardian.com
